

PRODUCT STRATEGY REVIEW

A quieter way to launch

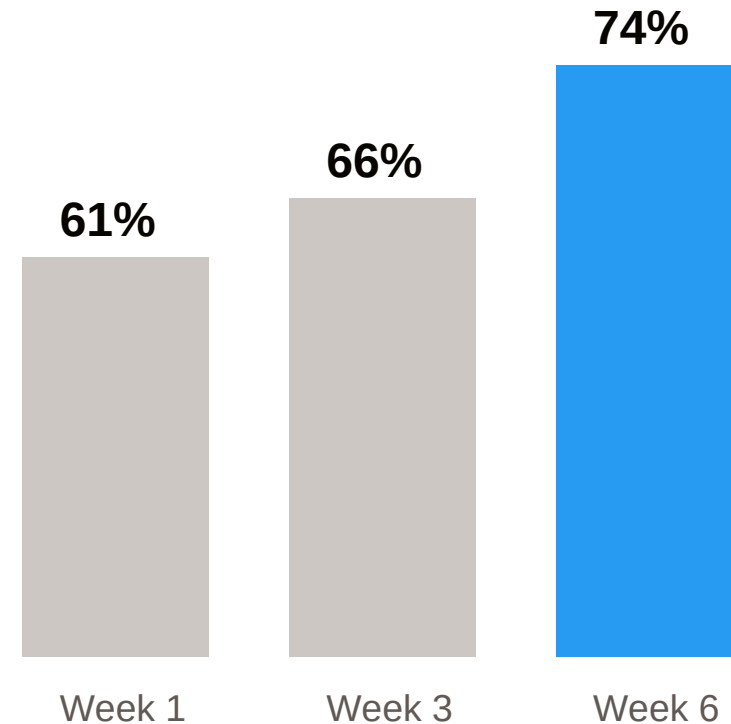

Start small, learn quickly, scale when the signal is clear.

THE SIGNAL

Clarity is already compounding

Activation rose from 61% to 74% in six weeks.

Traffic stayed flat. The first ten minutes got easier.

Three deliberate moves

- Invite the users who feel the problem most sharply
- Give them a guided first week
- Let what we learn shape the public story

What we will watch

- Week-one activation, target 80%
- Support tickets per new account
- Share of invited users who invite a teammate

What could go wrong

- A small cohort may not represent everyone
- The guided week needs two people from support
- Competitors may launch louder first

One focused month.

One shared measure of success.

Permission to learn before we amplify.
